REMANENT\nFACTICITY THEOREM\n### 2.1 Theorem Statement\n> For any
regime R and event E occurring within R, if E consists of nonzero
interaction\nacross/among/between Objects and/or States through/in/of
States (patterns, grammars, biases, vectors, motives, geometries),
then E generates a state-level fact-object F(E).\n> F(E) may be
locally occluded, fragmented, degraded, denied, or rendered
inaccessible to ordinary observers. However, F(E) cannot be globally
annihilated into equivalence with E, because both E and any attempted
occlusion of E generate remanent state- differences in the total
relation-field\n### 2.2 Mathematical Foundation\nAsk
